

Mpower sprint accelerator pedal

Add-on engine petrol, diesel, cng, lpg

Mpower Sprint improves driving your car in town at the same time making it smooth and sleek. On the road the electronic chip increases the torque of the engine reaching optimal performance. Easy to assemble, program according to the needs of the driver and the type of route.

Add Module Mpower Sprint Gasoline

Mpower sprint is the new additional unit programmable for gasoline started to increase engine performance through improved torque delivery in compliance of electronic and mechanical components of the vehicle.

Installation

Mpower is quick and easy to install.

Simply connect the digital module on the wiring of the accelerator pedal so that will be a bypass between the engine and the pedal itself.

In this way is not compromised since the control unit serial no action is taken directly on it.

You can remove Mpower at any time and return to the original power, without leaving traces in the engine and the computer's memory.

Example of wiring harness installation

Through the original wiring supplied installation time of the add-on module Mpower Sprint is very low, it will not be appropriate to make changes to the original car.
